Project Report Submission
Topic: Project report submission instructions.
Submission Deadline: TBD (early May)

In-person Demo:
- You will have to demonstrate your work to your course instructor as a group. There will be a signup sheet to setup an appointment with the instructor for final project submission.
- After that meeting, you will upload the following items (3 separate folders zipped together) to a server. We’ll share the link over email.

Report:
- It’s a “N+1” page report, where N = number of students in the group.
- Use an ACM style template: https://www.acm.org/publications/proceedings-template
- Do not change the font size or margins of the ACM template.
- The first page should contain: title, authors, abstract, and an overview of the project.
- The next N pages will describe the work of each individual student in the group. Make sure that the order of the authors in the author-list and their contributed pages are in the same order.
- Be technical. Look at the papers that we studied in class to learn how people write good papers.
- Use block diagrams, figures, plots, screen-shots when necessary.
- Research projects should have separate sections for describing experiments and evaluation.
- The final document must be a PDF.

Video:
- A two-minute video of the project needs to be uploaded to a server.
- Be creative – use screen recordings, screen shots, your voice, background music, a video of the system being used in the wild, etc. Do it as if you are demonstrating the App to general public.

Code:
- You will have to upload your code (the entire project) to a server.
- Note – if you do not want us to share your code in public, let us know.
